Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Claims 1-8 are in the application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Donkov in view of Gokan.

Donkov discloses an engine including an oil pan 28, a oil separator at 42, an oil return passage 40 configured to return separated oil to the oil pan. The oil pan includes baffle members 33 in the vicinity of an opening portion at which the oil return passage opens in the oil pan. The engine is arranged with its crankshaft axis perpendicular to the opening portion of the return passage 40.

Gokan is cited as showing a typical arrangement of an engine on a small boat wherein the crankshaft axis is arranged in a front-rear direction. In view of these disclosures, it would have been obvious to one skilled in the art to provide an engine arrangement as disclosed by Donkov in a small watercraft generally as taught by Gokan. It is a rather conventional concept to arrange the engine with its crankshaft parallel to the fore-aft

direction. Gokan also teaches with reference to figure 5 to locate the oil pan 28 towards the rear of the engine. To connect the oil return passage of Donkov at the rear end portion of the oil pan would have been an obvious matter of design choice to one skilled in the art. The rear portion of the oil pan would provide more space for such a connection. It is noted that the baffles of Donkov are disposed, in part, forwardly of the opening of the oil return passage. Further, the oil return passage is shown as being open perpendicularly to the baffles. To merely extend the conduit 40 through the rear of the oil pan and bend the conduit such that it has the same configuration as in figure 1 would have been a matter of design choice. The space in a small watercraft of the type disclosed by Gokan is minimal and the rear of the oil pan could be the more accessible area.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jesús D. Sotelo whose telephone number is 703-308-2563. The examiner can normally be reached on Mon. - Fri. 6:00 AM -2:30 PM.
